# DISCOVER OUR INNOVATIVE, WORLD-CLASS DESIGN FIREPLACES!

**Are you looking for a gas fireplace to compliment your interior? Or even better: a gas fireplace that is an eye-catcher in your home or office building? Then choose a gas fireplace from Element4, a designer fireplace made in the Netherlands, created by designer enthusiasts and people with a passion for technology, just like you...**

*A fireplace that fits you  
perfectly.*

Are you someone who always wants the best? Who gets enthusiastic about products that distinguish themselves from the majority? Then a gas fireplace from Element4 is the right choice for you. Our design team consists of discerning people with passion for design, knowledge of the latest trends and love for special products. You can see that in the end result: a very stylish fireplace that demonstrates the difference between "a beautiful fireplace" and also "contemporary design piece."

## DUTCH COMMON SENSE WITH GLOBAL ALLURE

Element4 is a top Dutch brand. We work practically and pragmatically, but with a strong focus on design. This ensures that our fireplaces are loved around the world by designers, architects and trend-conscious consumers. As real 'Dutchies', technology is an important issue for us. Our fireplaces have the most advanced technical features: they are efficient, can be controlled remotely and have an adjustable flame picture. This makes us a real trend-setter on the international market.

# HOW TO CONTROL YOUR FIREPLACE

## Standard

				
	<b>E-Save Remote Control</b>	<b>Puck</b>	<b>Home Automation Cable</b>	<b>ProControl App</b>
Easy On/Off	●	●	●	●
Manual Flame Adjustment	●	●		●
Lock Settings	●			●
Thermostatic Mode	●			●
E-Save (Eco Mode)*	●			●
Multi-Burner Control	●			●
Timer Mode	●			●
Personalized User Profiles				●
LED Burner Control				●
Eco Mode Fuel Savings Data				●
Available on your Smart Device				●

\*All Element4 fireplaces include E-Save efficiency settings, though these are only controllable via the remote and ProControl App. E-Save settings automatically modulate flame heights, to mimic the appearance of a wood-burning fire and save you up to 45% on fuel consumption.

## E-Save Remote Control: Standard

For maximum comfort, all Element4 Fires are delivered with an intuitive and powerful remote control. This remote allows you to control every aspect of your flame including: flame height, E-Save (Eco settings), multi-burner function, thermostatic mode and so much more.

E-Save Remote

## Puck: Optional

Simple in form and function, the new Puck controls basic functions including turning the fire on and off and adjusting the flame height. The Puck features blue back-lit buttons and is equipped with temperature sensing capabilities when you connect to the ProControl App.

## Home Automation Cable: Optional

The Home Automation Cable is for those who already have a home automation system installed. Once you connect your Element4 fireplace to your system, you'll be able to turn your fireplace on or off from your home's centralized control center. The installation is simple and you'll rest assured that your entire smart home, even your fireplace, is connected.

## ProControl App: Free Download

Want to easily control your gas fireplace from your smart phone or tablet? This is possible with the intuitively designed ProControl app from Element4. ProControl is the perfect choice if you want to completely control up to 8 fireplaces with the smart device already in your pocket.

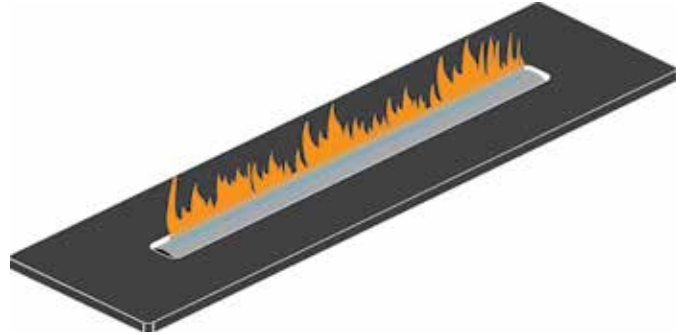

# PRODUCT-SPECIFIC BURNERS

As you review the pages of this catalog you'll notice that every fireplace has a specific burner system. These burners have been specifically designed for their respective models for both performance and aesthetics.

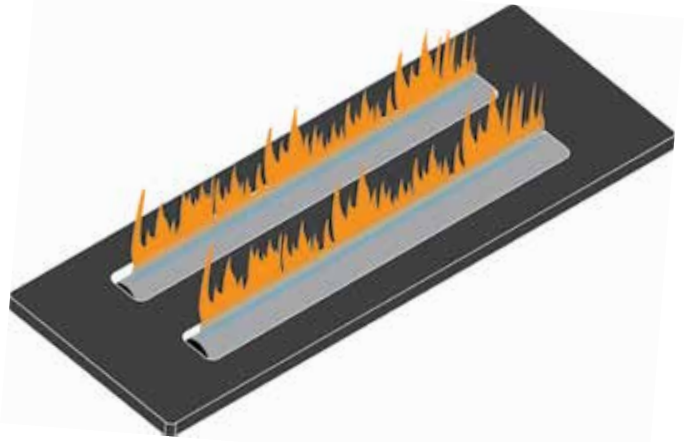

## SINGLE BURNER

The single burner allows for a minimum installation depth of the fireplace and contributes to low fuel consumption. Despite its modest appearance, it has a surprisingly big effect: full, lively flames and a natural fireplace experience.

## DOUBLE BURNER

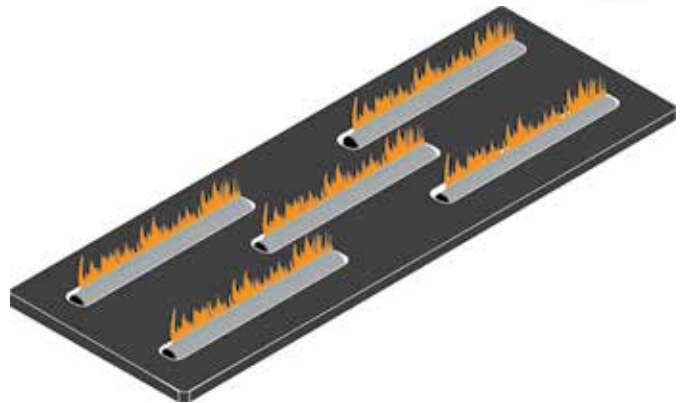

The double burner guarantees a beautiful fire experience because the fire is spread over the full depth of the fireplace. In addition, you can easily switch off one of the burners for even more control of the heat and the flame picture.

## QUAD BURNER

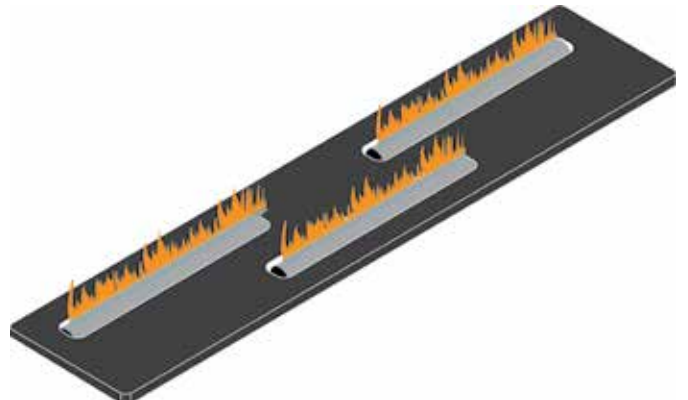

The Quad Burner has five burners and four distinct flame settings so you can drastically adjust the flames and the heat intensity based on your preferences.

Paired with the natural log set fire media, this system creates a truly realistic fire with unmatched depth, controllability and an alluring warmth.

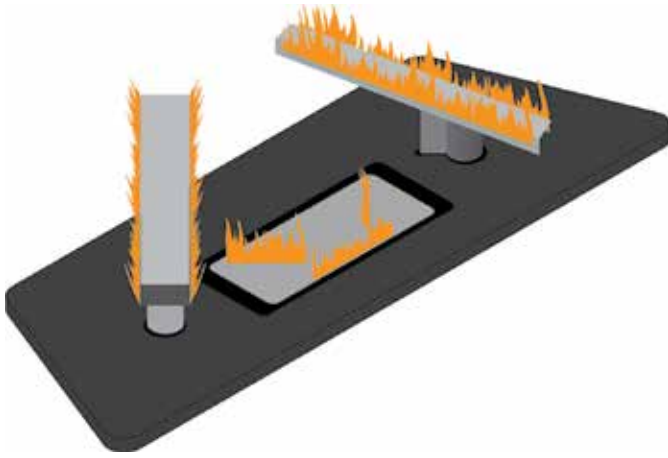

## MULTI BURNER

With three burners, you benefit from even more beautiful and intense flames. You can switch off the burners left and right. This way you can fully control the look of your flames, fuel consumption and heat output.

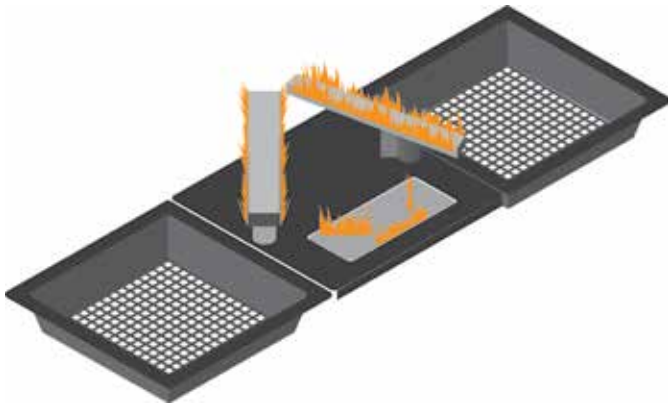

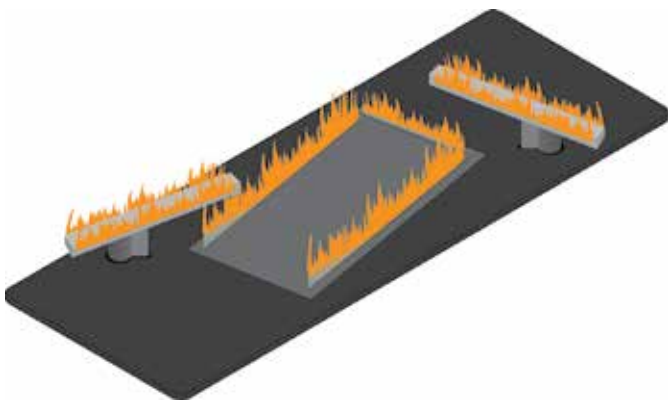

## REAL FLAME BURNER

The Real Flame Burner provides the worlds most natural looking gas fire. The flames, in combination with the expertly crafted logs, will have you thinking you just lit up a modern camp fire in your living room.

## REAL FLAME BURNER with LEDs

The Real Flame Burner provides the world's most natural looking gas fire. The flames, in combination with the expertly crafted logs, will have you thinking you just lit up a modern campfire in your living room.

## REAL FLAME BURNER TUNNEL

Combining the Real Flame Burner with the attention to detail means this burner looks realistic from both sides of a See-Through fireplace.

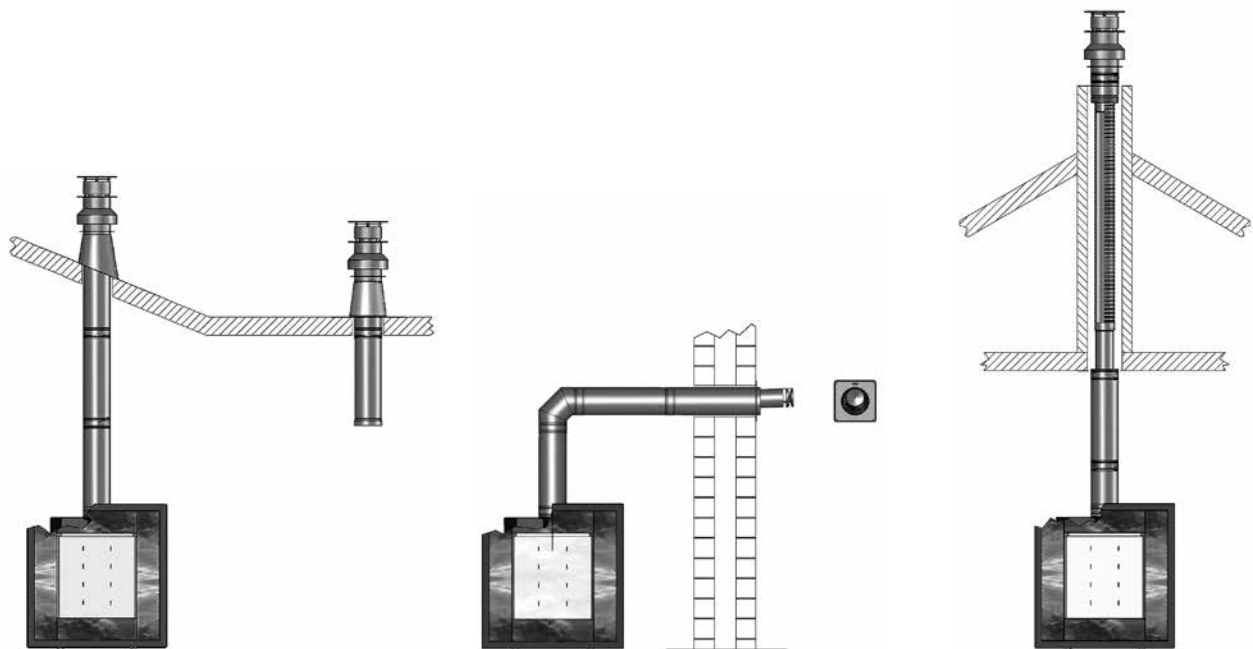

## REAL FLAME BURNER QUAD with LEDs

This Award-Winning burner provides the world's most natural-looking gas fire. The only one with four real flame burners and a bottom burner. This makes it optimally adaptable and also very attractive, even when burning at a low setting. In addition, the special LED lighting effect on the fire surface provides a glowing ember effect. The flames, in combination with the expertly crafted logs, is 90 % energy efficient and has a 75% turn down without compromising on appearance or ambiance.

# DISCOVER THE ADVANTAGES OF OUR DIRECT VENT SYSTEM

The gas fireplaces from Element4 work with a direct vent system. This means that the fireplace is not open to the room, but is completely enclosed. The fresh air and the flue gases run through the same, double-walled pipe that is connected to the outside air. What is the big advantage of a closed system? The flames are always behind the glass. This ensures heat retention in the balanced flue system, with a higher convection heat and a pleasantly warm room as a result.

Element4 fireplaces can be terminated through the roof or an exterior wall.

# WITH THE POWER VENT YOU CAN ENJOY A GAS FIREPLACE ANYWHERE

Want to install your gas fireplace in a place where there is no room for an exhaust pipe? You can do it with the power vent. This smart solution allows you to install your gas fireplace in places where it was previously impossible. And the best part is: the power vent regulates the correct settings for the supply and removal of air.

# FIRE MEDIA

Choose from a multitude of natural colors and textures with Element4's fire media options. These materials, designed specifically for gas fireplaces, completely cover the burner creating a more natural look, versus an exposed burner top, to provide a beautiful landscape for your flames.

Fire media choices vary depending on the model of fireplace, please see the individual product pages, for model-specific fire media options.

We offer the following styles and designs:

ANTHRACITE - STANDARD

CONCRETE STYLE

BLACK REFLECTIVE

*Choose your own style!*

# SAFETY BARRIERS

## INVISIMESH VS. GLASS SAFETY BARRIER

By regulation, all fireplaces with a glass front must come with a safety barrier installed to prevent direct contact with hot surfaces. Element4 provides two barrier options. Both feature a list of unique benefits and safety features.

## INVISIMESH SAFETY SCREEN

Safety screens are installed in front of the fireplace glass to prevent direct contact with hot surfaces. With our extremely fine InvisiMesh screen material, you get the benefits of a safety barrier as well as an uninterrupted view of your flames.

The screen does not affect a unit's use or heat output and has been designed specifically for the Element4 units.

### ADVANTAGES

- Installs securely in minutes via rare-earth magnets
- Easy to remove
- Near-invisible protection
- No added bulk or extra electricity require

### PLEASE NOTE

Invisimesh safety screens are included with all fireplaces with the exception of the 240H models. These are available with Standard mesh screens.

Lucius 140 with Glass Safety Barrier

## GLASS SAFETY BARRIER – OPTIONAL

An alternative to the InvisiMesh screen is our Glass Safety Barrier (GSB) system. With this option, air is vented between two glass layers, reducing the heat of the outermost pane. Hot air travels up the chase and is then efficiently distributed into the room, so no heat is lost. This clean and stylish look maximizes the trimless modern lines of your fireplace.

### ADVANTAGES

- Clean, trimless lines especially on multi-sided units
- Serviceability (easy to access fans)
- Great option for commercial projects

Modore 100H Single-Sided

## Introduction

# SINGLE-SIDED FIREPLACES

The single-sided fireplace is a true classic among gas fireplaces. This type of fireplace allows for completely flush to the wall installations and offers a beautiful view of the fire. You can easily install a single-sided fireplace with a mantel or any number of other design options. Did you know that some Element4 fireplaces require as little as 14" of installation depth with air clearance? Because of this design feature, you can make optimum use of your space.

Be inspired by our collection and discover which type of fireplace is right for you.

## CUPIDO 50

The Cupido series is the answer for those who want the most innovative flame look but are tight on space. At 11 3/8 inches deep this model is the slimmest gas fireplace on the market, perfect for older buildings, condos and other small spaces.

Real Flame Burner

Heat Output (Natural Gas):	10,000 - 35,500 BTU/hr
Turn Down (Natural Gas):	72%

2019 WINNER BEST IN SHOW

Summum 70 with Real Flame Burner

## Introduction

# SEE-THROUGH FIREPLACES

Would you prefer a see-through fireplace? Then you are choosing a truly dramatic fireplace design. A see-through fireplace creates an open connection between two rooms, allowing you to enjoy an atmospheric fire in two places at the same time. This is the perfect choice if you are looking for a gas fireplace with a dramatic spatial experience.

# SKY T

The Sky T is a vertical gas fireplace that comes in at an impressive 5 feet tall. Clean lines and a see-through design will bring head-turning drama to your home or commercial space.

Tenore 240 with Black Quartz

Summum 100 C Left Corner

## Introduction

# CORNER FIREPLACES

With a corner fireplace you create maximum ambiance in your room. This type of gas fireplace offers a wide view of the robust flames and provides even more atmospheric experience thanks to the extra pane of glass. Element4 offers a choice of various sizes, installation possibilities and capabilities. This way you will always find a corner fireplace that matches your installation situation and interior.

## BIDORE 95

A stunning, frameless, linear right or left corner fireplace. The Bidore 95 features a clean and contemporary design and the corner style opens the flames further into a space.

Lucius 140 Peninsula

## Introduction

# PENINSULA STYLE

Choose a peninsula style gas fireplace and create a stylish separation between two different spaces. Thanks to the tall glass pane, you can view the beautifully natural flames from several positions. As an added benefit, you will enjoy the efficient warmth from your fireplace in both spaces. Peninsula style fireplaces can be installed floating or in a wall. Discover our collection of peninsula style fireplaces and be inspired by the ambiance they create.

# LUCIUS 100

The Lucius 100 room divider is a stunning, frameless peninsula fireplace featuring an unobstructed view of your flames on three sides.

Intertek, a nationally recognized testing laboratory (NRTL), has certified that the Element4 fireplaces imported by European Home meet the North American standards (ANSI Z21.50a, CSA 2.22a) for direct-vent appliances. These direct-vent appliances are approved for use by all current North American building codes including California, Florida and New York state building codes.
